EXPERIENCE

The Select Group (under Amentum), Camp Smith, HI—

J326 AI Lead and Data Engineering / Science / Architecture

March 2025 - PRESENT

Work as a developer and technical liaison for USINDOPACOM Joint Fires Division. Created, installed, enriched, tested agents, models, and applications on several networks for the Joint Fires Division.

Coordinated with several development teams to analyze how AI/ Data could improve the Targeting Cycle, Weaponing Process, Assessments, Collections, and Order of Effects.

Worked alongside operators in the Joint Fires Center and Joint Operations Center to provide training and support for AI tools and applications.

Evaluated AI tools developed for J2/J3 organizations and reported capabilities and potential use cases to leadership. Translated leadership priorities into technical requirements for developers and engineers across J2, J3, J4, CDAO, and JFN organizations.

This required in-depth technical understanding of the following:

- Prompt Engineering, Tool-Calling, and how to structure a complex Agentic System
- Network to Network Capabilities and Synchronization
- Weaponing tools like JTCG/ME's Sims and Physics-Based Tools, Capability Assessment, CSP's, Non-Kinetic Effects
- Military Doctrine and Structure for Planning and Messaging
- Joint Fires Network: Jupyter Notebooks, Python SDKs and Libraries, Local Model Installation and Tuning
- Models and AI Tools: Palantir/Maven, GenAI, Compass AI, Scale, Clairvoyant, Nebula, ChatGPT, Starshield (Grok), Claude
- J-Series Message Traffic: Parsing, Binning, Combining for Players, Tracks, Platforms, Events and reflecting these changes
- Data Sources: Blue and Red Object Ontologies, ADVANA, MARS, ATOMS, MRI (Munitions Readiness Initiative), UMAMI, Logistics

SKILLS

Agent Development with Frontier/ Physics-Based Models

Tool-Calling, Prompt Engineering, Analyzing Agentic Systems

Structured, Unstructured, Streaming Sources

Weaponing, Targeting, Assessment, Collection Cycles and Practices

Analyzing, Testing, Tuning, Benchmarking Models and Applications

LANGUAGES AND TOOLS

Databricks, AWS, GitHub, Docker, Jenkins

UNIX, Python, JAVA, C++, JavaScript, SQL, Kafka, Spark

Openclaw, Claude Code, Codex, Grok Build

Palantir/Maven: AIDP, Gotham, Foundry, Maverick, Ontology Management, Target Work Bench, Gaia

Booz Allen Hamilton, Camp Smith, HI—

ADVANA Data Engineer/ Lead Developer

July 2022 - March 2025

Worked as the lead developer and data engineer for the ADVANA Incident Response Team under the CDAO.

Worked on the establishment of hundreds of defense data pipelines including MRI, GCCS, Link16, Thresher, GDSS, JOPES, SMS, IGC, NTS, FLIGHT AWARE

ADVANA Lead Data Engineer (PENTAGON)

August 2021 - July 2022

Worked as the sole Data Engineer for what would become a 60-person worldwide data analytics team.

Created processes for tracking and verifying data transfers.

INFOSYS LTD, Newark, DE— *Data Engineer at Bank of America*

DECEMBER 2018 - JULY 2021

Worked as a data engineer/developer for Bank of America.

Revature, Reston, VA — *Software Developer*

SEPTEMBER 2018 - DECEMBER 2018

Created a data pipeline for business evaluation using Hadoop, Map/Reduce, Sqoop, and Hive.

EDUCATION

University Of North Carolina at Charlotte, Charlotte, NC— *Bachelor of Science in Electrical Engineering*

August 2012 - August 2016

GPA: 3.20

Signals and Systems, Logic System Design, Computer Engineering, Graphics Processing, Electronics
